

# Sketches and Drawings// You need to make first sketches as well as refined drawings of your ideas.

## First sketches

1. Once you have enough research on your topic, **start sketching** different ideas based on your findings.
2. Draw **shapes** and **make variations** for every idea that you have.
3. Ask for **feedback** and **correction** of your first sketches. Remember that the objective here is to **visualise ideas**.

## Technical drawings

1. Draw your object or space from **different points of view** (front, side, top, bottom, isometric view).
2. Write down the **dimensions** of each part. Measure in real scale if needed.
